

Annex 7: Student Internship Report Form

Student Internship Report Form

Intern Name: _____

Department Supervisor Name: _____

Reporting Period: _____

Report Number (circle one): 1 2 3

Instructions:

The intern will complete this section:

a) Task/s performed

I worked as a **Backend Developer** on an E-Learning platform. I developed RESTful APIs with Node.js and Express.js, managed the MySQL database, implemented JWT authentication and authorization, and developed backend features for courses, lessons, enrollments, quizzes, assignments, and student submissions. I also tested APIs, fixed errors, added validation and error handling, and integrated the backend with the frontend.

b) Learning Experience

I gained practical skills in Node.js, Express.js, REST API development, MySQL/SQL, JWT authentication, authorization, API testing, validation, error handling, and frontend-backend integration. I also learned professional backend organization using routes, controllers, models, middleware, and validators. The internship improved my debugging, problem-solving, teamwork, and software development skills.

c) Challenges

The main challenges were API integration, database relationships, authentication and authorization, validation, and debugging unexpected errors. I solved them through systematic API testing, reviewing SQL queries and relationships, tracing request and response data, and improving backend logic and error handling. This strengthened my problem-solving and backend development skills.

Host Institution stamp: _____

Annex 8: Student Internship Activity Log

Student Internship Activity Log

Host Institution:

Intern Name:

Department Supervisor:

Reporting Period (DD/MM/YYYY):

Instructions:

1. The student-intern is to fill this form by recording major tasks performed by them.
2. Respective internship supervisors are to review and evaluate the student's activity log.

Table 7: Weekly internship activity log

Week	Major tasks performed	Hours
Week 1	Project orientation; reviewed E-Learning requirements, backend structure, APIs, and database design.	40
Week 2	Worked with Node.js/Express.js backend; reviewed routes, controllers, models, middleware, and MySQL integration.	40
Week 3	Developed and tested JWT authentication, authorization, protected routes, and role-based access.	40
Week 4	Developed and tested course, section, and lesson APIs; worked with SQL queries and database relationships.	40
Week 5	Worked on enrollment and quiz APIs, including questions, options, attempts, answer saving, and submission.	40
Week 6	Worked on assignment submissions and instructor evaluation, including grading and feedback functionality.	40
Week 7	Integrated backend APIs with the frontend; debugged authentication, validation, API responses, and data flow.	40
Week 8	Performed API testing, debugging, error handling, final integration, and system improvement.	40
